Why an AI project generator

A creative assistant for organizing and publishing portfolio case studies

I PROVIDE

Title
Project type
Short description
Imagery

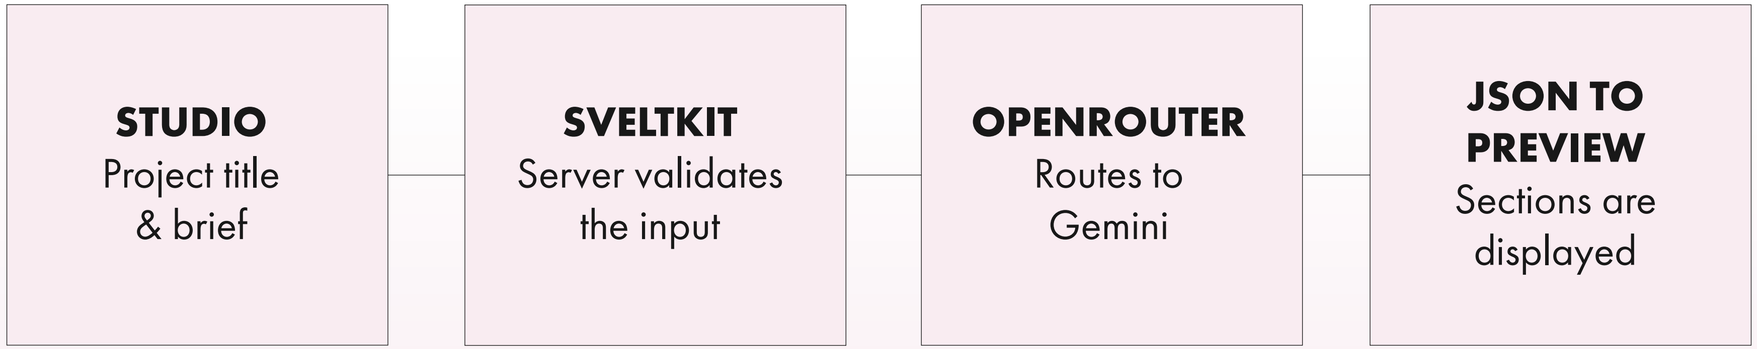

AI SUGGESTS

Introduction
Storyboard
Process
Final Outcome

PROCESS
AI proposes the structure, SveltKit components keep the design consistent.

How the API works

One request will connect my studio to Gemini 2.5 Flash Lite.

The API key stays on the server, never in the browser.

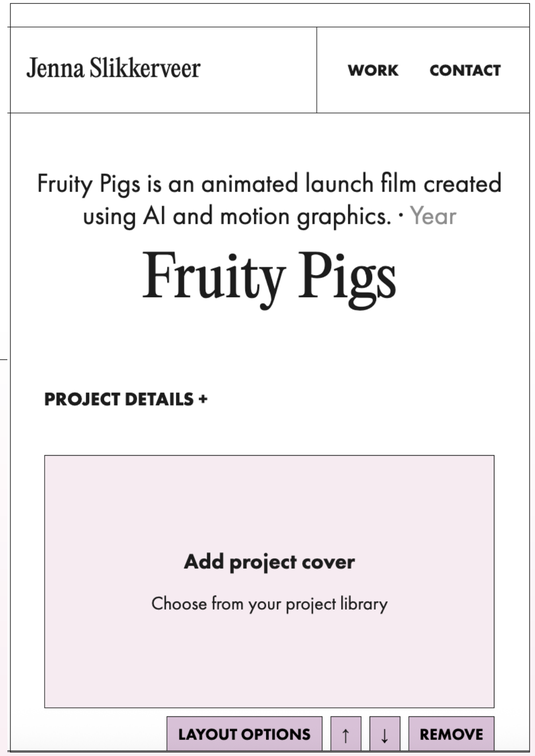

Implementation Example

EXAMPLE BRIEF

Fruity Pigs
Illustration, Motion,
AI Creative
Animated launch film

EXAMPLE JSON

```
{
"sections": [
{ "type": "introduction" },
{ "type": "storyboard" },
{ "type": "animation-highlights" },
{ "type": "final-outcome" }
]
}
```

Code renders allowed sections, not AI-generated HTML or CSS.

What my AI prompt tells Gemini to do

INSTRUCTIONS FOR GEMINI

1. Act as an editorial portfolio assistant.
2. Suggest approximately 3–7 sections appropriate for the project.
3. Use your Fruity Pigs layout as a design reference.
4. Only suggest approved section types and layouts.
5. Avoid inventing project details.
6. Return structured JSON, not HTML or CSS.

What went wrong, and how I fixed it

ATTEMPT 1

Free model
HTTP 429
Rate limited

ATTEMPT 2

Added $ to
OpenRouter 😕
Gemini 2.5 Flash Lite
It worked

Lesson: the model you choose affects reliability and testing

WHAT I LEARNED

An API connects services

JSON (data) makes AI output useable

My code in SveltKit controls the design
